

Founded in 1948, our predecessors were the first group of obstetrician gynecology specialists in Lancaster. More recently, OBGYN of Lancaster was the first to provide Gardasil immunization to prevent HVP and associated cervical cancers. We were the first OBGYN group to provide diagnostic imaging with advanced 3D/4D ultrasound technology. We were the first to offer women experienced surgeons using the DaVinci robotic assisted surgery system. These are only some of the “firsts” we’ve introduced in the Lancaster area — and only part of why OBGYN of Lancaster is first in women’s care.

OBGYN of Lancaster

is dedicated to providing comprehensive, compassionate obstetric, gynecological and related services to women of all ages and stages of life.

We are a group of board certified physicians, certified nurse midwives, certified registered nurse practitioners, and highly trained staff providing complete care for women.

Planning to add to your family?

OBGYN of Lancaster was the first to combine the knowledge and expertise of board certified obstetricians with the supportive approach of certified nurse midwives and the safety of labor and delivery at nearby Women & Babies Hospital with its full-service NICU. Add our nurse specialists, on-site laboratory, ultrasound and fetal monitoring, plus extended office hours in the evenings and on Saturdays, and you can easily see why generations of Lancaster's moms have put their trust in us.

Need an annual check-up and PAP?

Our physicians, midwives and nurse practitioners offer annual health maintenance visits for women of all ages. With our intimate understanding of women's health issues, we can provide expert guidance and address all your concerns from healthy life choices and fertility to perimenopause and osteoporosis to a richer vitality in your golden years.

Need answers to a women's health problem?

All our physicians accept new patients. We welcome self referrals as well as direct referrals

from all providers. We maintain special reserve appointment times so we can respond quickly when a woman needs diagnosis and treatment for gynecologic problems. Our diagnostic capabilities include on-site laboratory services, diagnostic imaging with state-of-the-art 3D/4D ultrasound technology, plus other office testing. If surgery is required, we offer the complete range of surgical services including minimally invasive surgery that reduces blood loss, lowers the risk of infection, shortens recovery time and heals with less scarring.

**Generations of Lancaster's women
have trusted OBGYN of Lancaster
to provide comprehensive Obstetrical
and Gynecological services.**
