

It used to be that expectant parents could only see their baby in the flat, grainy images of a traditional 2D sonogram. But now there's a better technology.

It's called 3D/4D prenatal ultrasound imaging, and it's available locally as an elective service only from OB-GYN of Lancaster. The ultimate ultrasound experience, 3D/4D imaging allows the baby to be seen in 3-dimensional, volumetric space so that the image can be rotated on a computer screen. Which lets you view the front and sides of your baby's face and see your unborn child from several different perspectives. Even more incredible, this advanced technology can also capture real-time (4D) motion, so you can watch your soon-to-be-born baby stretch and play, yawn and smile, all with amazing detail and in full color.

## MIRACLE MEMORIES™

AT OB-GYN OF LANCASTER

See clear images of your unborn baby actually moving with 3D/4D Ultrasound.

## Create your own **Miracle Memories.**

Simply set up an appointment for a 20-30 minute session with our Registered Diagnostic Medical Sonographer and let her guide you through what is sure to be one of the most beautiful and memorable

experiences of your life. If you desire, she can even make a gender determination for you. The best time to schedule an appointment is between the 26<sup>th</sup> and 32<sup>nd</sup> week. By this time, your baby will have well-defined facial features and still have plenty of room to move around. You must already be receiving prenatal care from a health care provider and have undergone a diagnostic ultrasound to confirm your due date, screen for anomalies and determine any other pregnancy-related issues.

## We offer two affordable packages.

**Miracle Memories™** (\$150) – is a 15 minute experience of guided 3D and 4D imaging of your unborn child, plus a DVD of the images to share with friends and family.

**Miracle Memories™ Premium** (\$175) – is a 25 minute experience of guided 3D and 4D imaging of your unborn child, a DVD of the images, and two color photos to start off your baby album. Additional single color prints, or a set of wallet-size prints, are also available for \$10 each.

This is an elective service which is not normally covered by medical insurance. Because every baby is different, results cannot be guaranteed.

*“Seeing your baby in the womb is an unforgettable bonding experience.”*

— Kate Quinn, RDMS® Ultrasound Supervisor

Experience the ultimate in prenatal imaging. Call OB-GYN of Lancaster today at 393-1338 to arrange your own Miracle Memories. And get to know your baby even before birth.
